

Mortality Report: Learning from Deaths Quarter 3: 01 October 2022 – 31 December 2022

Appendix 1

Learning from Deaths Q3 22/23 Report

The following data represents the high-level reporting of deaths which occurred within our services over the period of Quarter 3 2022/23.

A more detailed report has been ratified and approved by the Quality and Safety Committee as per the Learning from Deaths Policy.

There were 3 deaths reported to the Trust and all have been reviewed in accordance with Trust policy. On this occasion, none of the deaths were within scope of this report during this period. This is because the deaths were not associated with any care delivered or harm caused by services provided by the Trust. Duty of Candour was not applicable to any of these cases.

There was one child death reported during this quarter, which followed the appropriate investigation processes and there was no learning specific to the Trust.

We continue to promote shared learning across the health and care sectors and work collaboratively with our system partnership to identify and address the impact of Covid-19 within all the communities in which we provide services, focusing on addressing health inequalities on a population-based approach.

Dr Nick Cross

Executive Medical Director
